

BEPI An initiative of the Foreign Trade Association (FTA)
Business Environmental Performance Initiative

BEPI Improvement Phase

Supporting practical environmental improvement in your supply chain

FTA
Foreign Trade Association

BEPI IMPROVEMENT PHASE

The main vehicle available in the BEPI System is the **BEPI Improvement Phase**, aimed at improving environmental management and performance at producer sites through **local support** and **capacity building**.

SAQ AND ON-SITE

ANALYSIS

4+1

ENVIRONMENTAL CONSULTANT

Discussions with relevant staff

Visual inspection

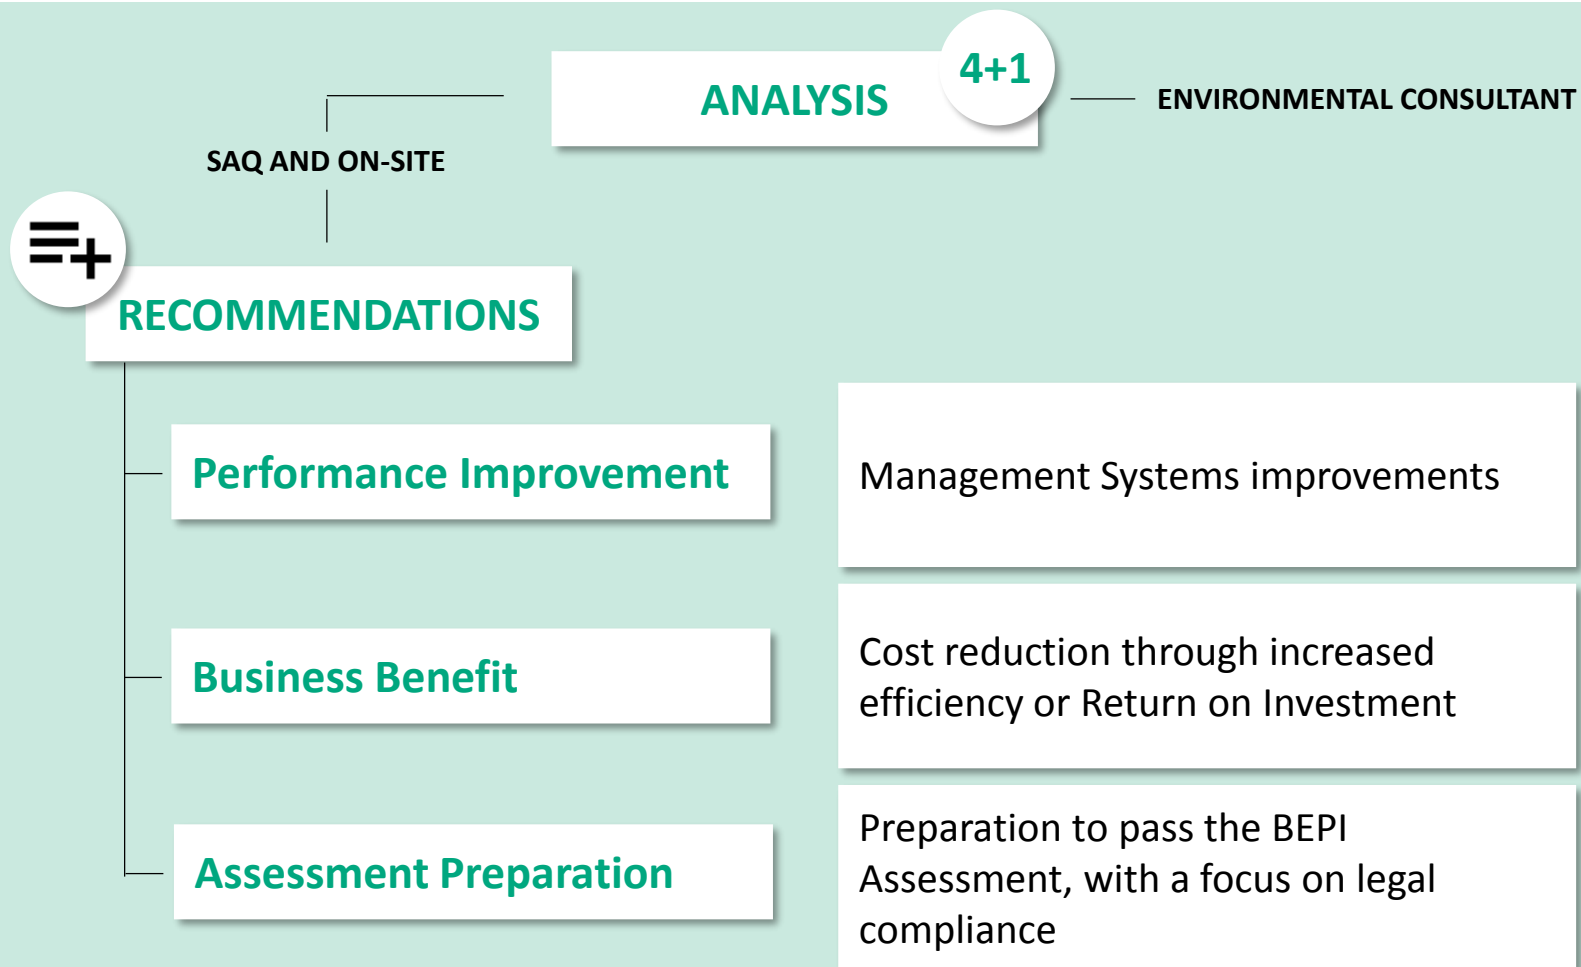

Document review

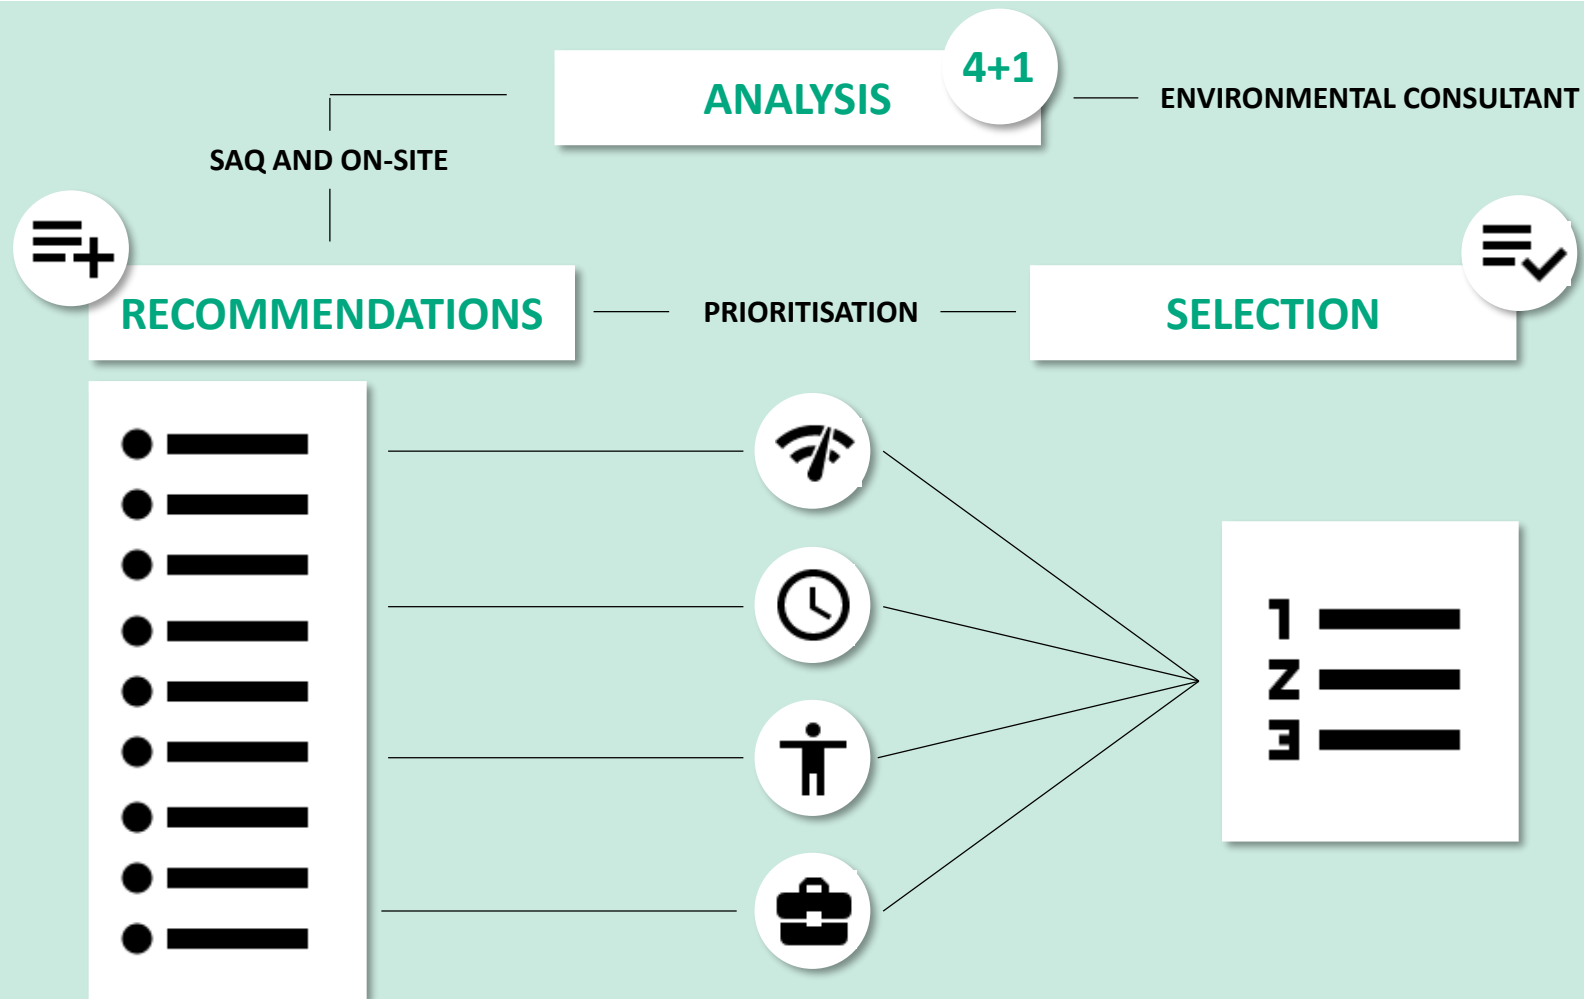

Technical review

BEPI IMPROVEMENT PHASE

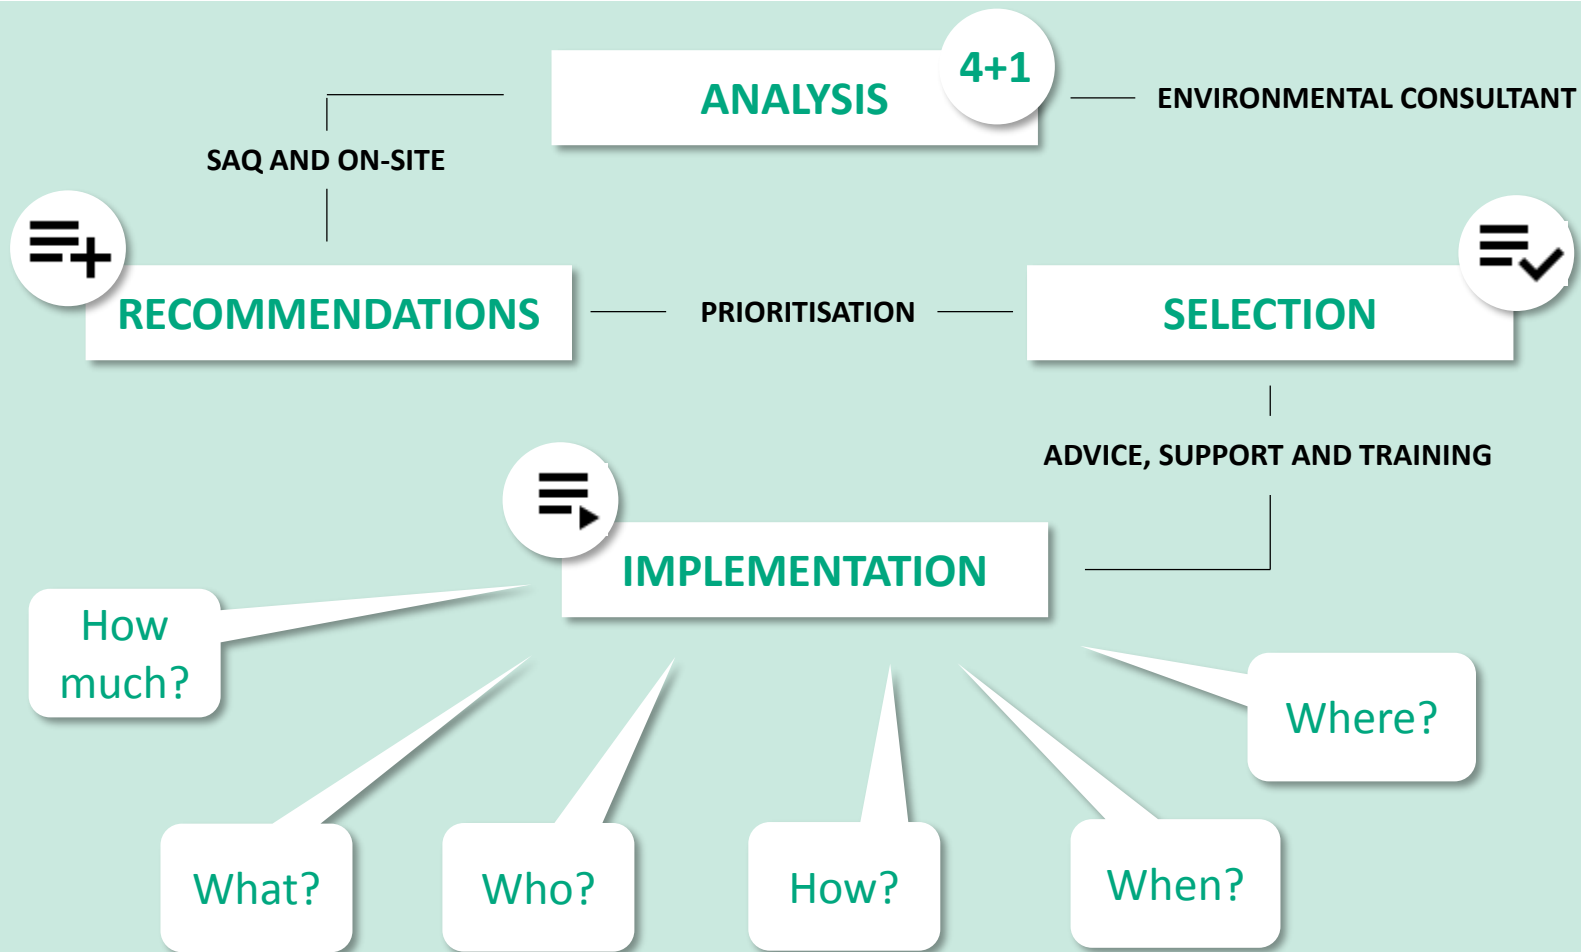

A BEPI recognised local environmental consultant conducts an **ANALYSIS** of the location, through review of the self-assessment (SAQ) and an on-site visit, across the most impactful environmental areas

Based on the analysis, the consultant will draft a list of **RECOMMENDATIONS** for environmental improvements

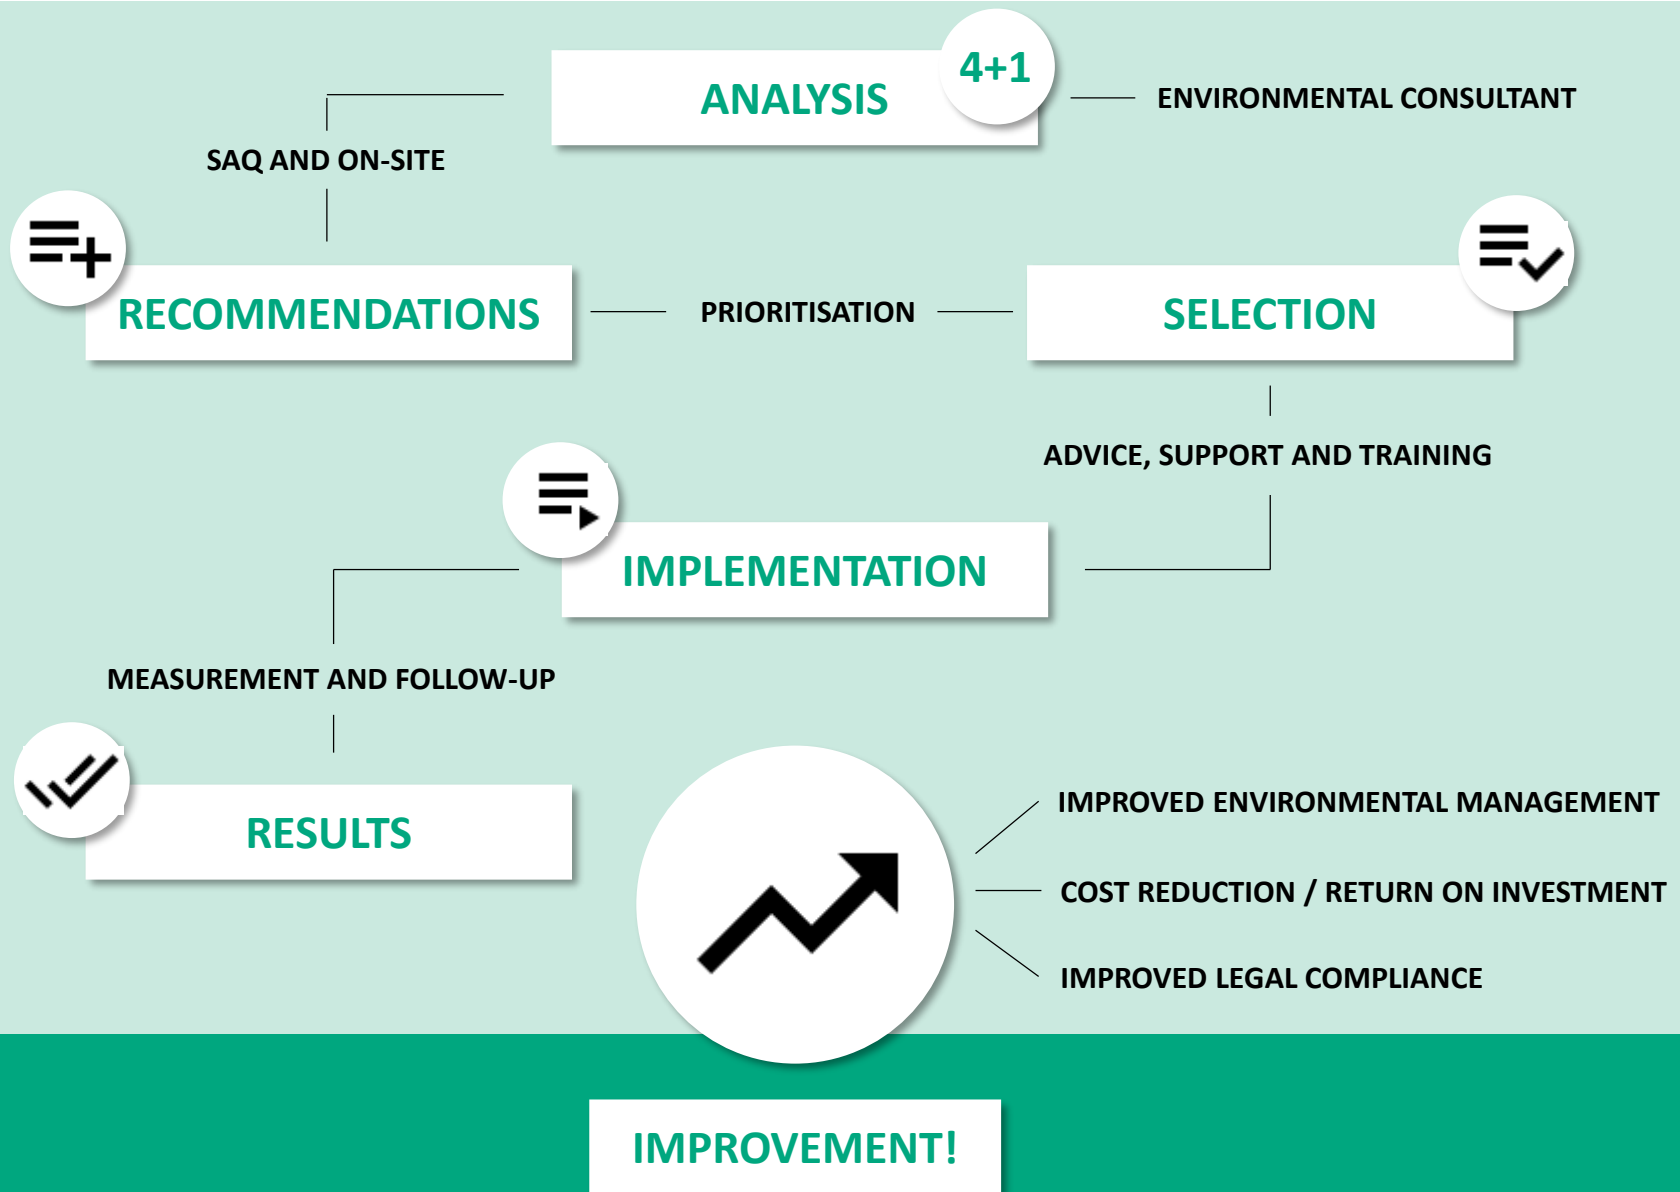

From the list of recommendations, the consultant and the producer will make a **SELECTION** of improvements to be implemented, based on **potential impact, available time, people and budget**

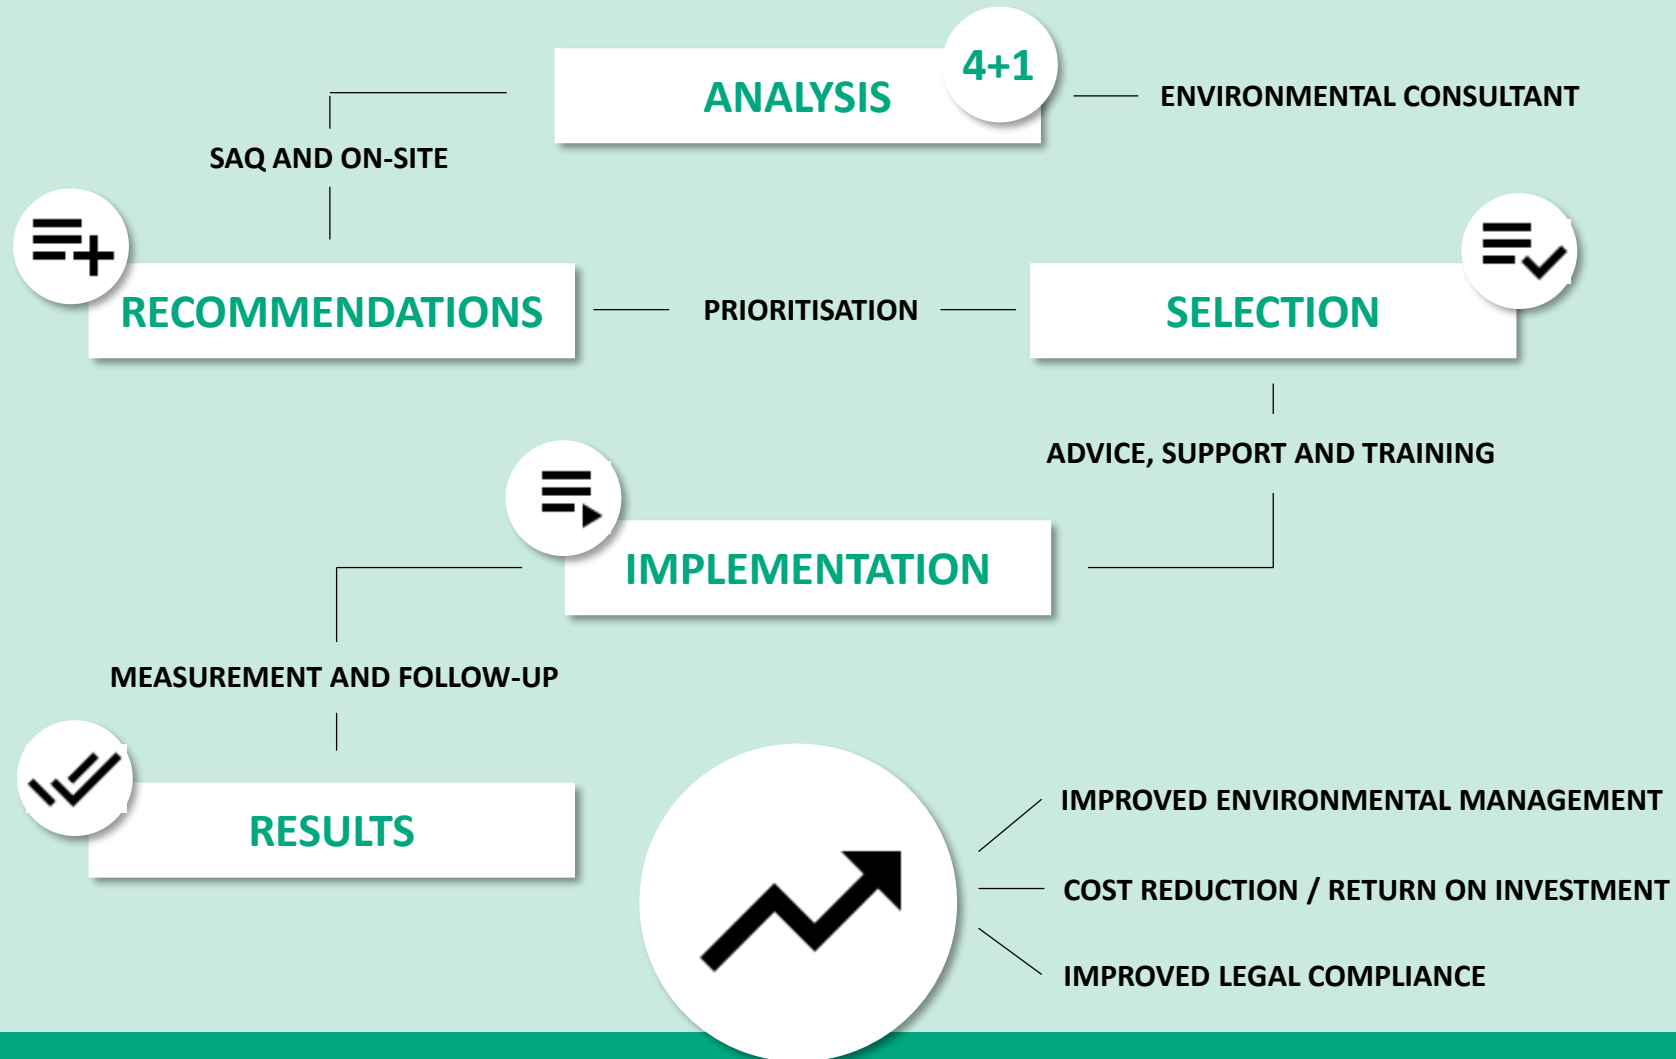

BEPI IMPROVEMENT PHASE

The consultant will provide advice, support and training to the producer for the **IMPLEMENTATION** of the selected improvements

BEPI IMPROVEMENT PHASE

Consultant support and customer encouragement will drive the producer to successfully implement improvements with tangible and measurable **RESULTS** at the end of the process

The entire process is supported in the **BEPI Platform**, facilitating every step and providing BEPI Participants with easy access to their supply chain's efforts and progress

 **ALL IN ONE PLACE**
